

METROPOLIS_general description of the model

DESIGN BY ROSSI&CO

Metropolis features a winning combination of design, materials and technology, capable of forming a modern, versatile and environmentally friendly kitchen.

Amazingly easy to personalise, Metropolis is designed to form elegant and functional solutions using original materials that offer excellent performance and high visual impact. Metropolis is designed using Evolution System – the kitchen design system that maximises storage and improves looks, functionality and user-friendliness – and features generous and well-organised storage space. An 8 cm plinth, 81 cm high base cabinets and taller, deeper wall units mean increased storage space. A thickness of 23 mm makes the doors particularly solid. Customers can choose from two opening systems – recessed groove and flat groove – both perfectly integrated with the look of the kitchen. Arranged horizontally on the base cabinets and vertically on the tall units, both systems ensure easy door opening.

Attention to detail is evident from the prestige interiors that enhance the value of the kitchen. The carcasses are fully finished and available in a choice of three colours: Rosè, Vulcan and White.

Metropolis is the first kitchen in the Stosa range to feature FSC® certified cabinets as standard.

The compositions on display at Salone del Mobile are FSC® certified.

The 2022 restyling of Metropolis comes in 4 new finishes:

thermo-structured Rovere Cornero, Rovere Cornero Riga, Bronze Metal PET and Acciaio Metal.
