

06_Natural_Aliant_Charming

Evolution System

The combination of Aliant and Natural in this composition gives plenty of scope for expression and stands out for a clever pairing of materials and colours as well as a stylishly structured, three-area design.

The side that contains the tall unit block features a new cupboard design with hidden, smooth wood doors in Termocotto finish. Once closed, these doors hide the work niche that houses the sink as well as domestic appliances like oven and wine cooler, giving the composition a more orderly appearance.

The first 12 cm drawer is in the new Rovere Termocotto Cannettato finish while the worktop, inter-base splashback, doors and 24 and 26 cm drawers are all in **Cement Satin Neolith®**. **This finish also appears in the generous central island with the hob and top in Wulong Neolith®.**

Original and sophisticated details abound, like the **equipped riser**, an element for island, peninsula and snack tops that forms a splashback with storage space where normally there is no back at all. Positioned behind the cooking area, this extremely useful element offers quick access to ingredients and herbs.

The composition is enriched by **Rovere Termocotto boiserie** which covers the second wall for almost 4.5 metres in width and 3 in height and is interrupted by two lines of **horizontal suspended wall units in Rovere Termocotto Cannettato**. The boiserie element represents a solution that is simultaneously functional, decorative and extremely sophisticated.

Plinth and Groove in Titanio.

Tide hood in glass.
