

METROPOLIS_general model description

DESIGN BY ROSSI&CO

Metropolis is the result of an ideal combination of expert design, a selection of fine materials and the use of innovative technologies, for a contemporary, flexible kitchen conceived with an awareness of key environmental requirements.

This kitchen is characterised by its capacity to be extremely customisable, offering elegant, practical solutions with cutting-edge materials both in terms of performance and visual impact. Courtesy of the Evolution System, which aims to optimise space through innovation with regard to style, functionality and interaction, the Metropolis boasts plenty of well-organised, roomy elements: 8 cm plinths, 81 cm base units and high, deep wall units provide ample storage space, while the 23 mm thickness of the doors increases their durability.

The kitchen offers two types of openings, both hollow groove and flat groove, which blend harmoniously into the design and enable easy access to the doors - both horizontally for the base units and vertically for the tall units.

The attention to detail is reflected in the luxury interiors, which enhance the quality of the kitchen environment, while the finely-finished carcasses are available in a range of different colours.

Metropolis is also the first kitchen in the Stosa range to be produced using FSC®-certified elements as standard.
