

NATURAL_general model description

DESIGN BY ROSSI&CO

Natural was the first Stosa model to be designed using the Evolution System, the solution that has enabled the evolution of the very concept of the kitchen, revolutionising modularity, offering all-new internal accessories and technical construction details with a more refined and sophisticated aesthetic.

The distinctive feature of Natural lies in its wide range of finishes, applied to the base, wall and tall units. Of these, the new milled door is of particular note, and is available in different colours, along with the frame door, which lends the model a sense of elegance and a touch of simple originality for all customers looking for perfection in the tiniest details.

In addition to the appeal of the materials, Natural also boasts extraordinary versatility - the result of extensive research focused on continuous innovation, giving greater depth and height to the elements in the kitchen system, for maximum storage capacity. These include new retractable sliding columns and niches, which can accommodate and elegantly conceal the various electrical appliances in the space.

Natural also features dedicated solutions for the living area, enabling the design of this space to be coordinated with the kitchen. In fact, this model expertly combines a range of different elements and finishes, lending a sense of dynamism to the volumes and combining the living room and kitchen into a single environment, with open spaces and fluid passages that enable these two spaces to remain in constant communication with each other, for a sense of perfect aesthetic continuity.
